PROFESSIONAL SUMMARY

Cloud Solutions Engineer with 5+ years of experience across enterprise cloud infrastructure, DevOps, IT service operations, application support, and production environments. Experienced in Microsoft Azure and AWS, Kubernetes platforms, infrastructure automation, CI/CD, monitoring, incident and problem management, troubleshooting, security, and service reliability. Skilled in supporting production workloads, coordinating technical escalations, maintaining service levels, and collaborating with customers and cross-functional teams.

CORE TECHNICAL SKILLS

Cloud Platforms: Microsoft Azure, AWS, Google Cloud Platform (GCP)
Azure Services: AKS, App Service, Azure VMs, Azure SQL, Storage Accounts, Blob Storage, Key Vault, VNets, NSGs, Private Endpoints, Azure Front Door, WAF, Azure Virtual Desktop, Azure Monitor, Application Insights, Log Analytics
AWS Services: EC2, S3, VPC, EKS, ECR, Lambda, IAM, RDS, CloudFormation, CodeBuild, CodeArtifact
Containers & Platform: Docker, Kubernetes, AKS, EKS, Helm, Argo CD, OpenLens
IaC & Automation: Terraform, AWS CloudFormation, Ansible, Shell Scripting
CI/CD & Version Control: Jenkins, GitHub Actions, GitLab CI, AWS CodeBuild, Azure DevOps workflows, CI/CD, Git, GitHub, GitLab, Bitbucket
Monitoring & Observability: Datadog, Azure Monitor, Application Insights, Log Analytics, Prometheus, Grafana, ELK Stack, Elasticsearch, log analysis, Site24x7, Opsgenie

ITSM & Service Operations: ServiceNow (SNOW), Jira Service Management, incident/problem/change, SLA, RCA, escalation, service reporting, knowledge management, technical coordination, issue/risk tracking, delivery and stakeholder updates
Networking & Security: TCP/IP, DNS, routing, VNets, NSGs, VPN/connectivity troubleshooting, IAM, RBAC, Conditional Access, TLS/SSL, Key Vault, managed identities

Tools & Collaboration: Jira, Confluence, MS Project, Rundeck, OpenLens, Postman, Cloudflare, Linux, Bash, PowerShell
Databases: SQL, SQL Server, Azure SQL, MongoDB, relational data, database connectivity and troubleshooting
AI & ML Fundamentals: generative AI and LLM concepts, AI-assisted operations, automation use cases, ML lifecycle awareness

PROFESSIONAL EXPERIENCE

Senior Cloud Engineer | Sitecore (DCT, FAB, Saudi Aramco, Porsche) Dec/2024 - Aug/2026

- Supported enterprise Azure production workloads as part of the Managed Cloud Platform (MCP) team, focusing on availability, reliability, security, and operational stability.
- Administered and troubleshot AKS, App Service, Azure SQL, Storage Accounts, Blob Storage, Key Vault, VNets, NSGs, Private Endpoints, Azure Front Door, and WAF.
- Supported Kubernetes application operations, including deployments, configuration updates, Helm-based releases, workload troubleshooting, and environment-specific changes.
- Supported CI/CD and release processes using Git-based workflows, coordinating deployment activities, validating changes, and assisting with release troubleshooting.
- Investigated production incidents across application, infrastructure, Kubernetes, database, and connectivity layers; performed RCA, documented findings, and supported corrective actions.
- Monitored platform health using Datadog, Azure Monitor, Application Insights, and Log Analytics; reviewed alerts, logs, errors, availability, and performance indicators.

- Troubleshot application and API connectivity involving App Services, AKS, backend services, private connectivity, DNS/routing paths, and secure service connections.
- Worked with Azure networking components including VNets, NSGs, Private Endpoints, routing, and access-control settings to support secure connectivity.
- Supported Azure Front Door, WAF, and CDN configurations for secure traffic handling and application delivery.
- Handled operational security activities involving RBAC, access management, managed identities, Key Vault secrets, TLS certificate renewals, and configuration reviews.
- Coordinated with customers, engineering teams, and stakeholders on incidents, service requests, technical escalations, status updates, and service restoration.
- Prepared operational documentation, incident notes, customer updates, reports, troubleshooting guides, and knowledge-transfer materials.
- Applied Site Reliability Engineering (SRE) practices to support production service availability, operational stability, and reliable customer-facing application environments.
- Reviewed monitoring signals, alerts, logs, and service-health indicators to identify emerging issues, support incident response, and reduce time to diagnose production problems.
- Contributed to incident and problem management through impact assessment, technical escalation, root-cause analysis, follow-up actions, and clear incident documentation.
- Supported reliability improvements by investigating recurring failures, validating configuration and deployment changes, and sharing preventive recommendations with engineering teams.
- Assisted with release and change readiness by checking environment health, monitoring deployments, coordinating rollback or recovery actions when needed, and validating service restoration.
- Worked with operational monitoring and alerting tools, including Datadog and Azure Monitor, to review application errors, availability, performance, and infrastructure health.

Senior Infrastructure Engineer / DevOps | HCLTech · Colombo, Sri Lanka · Jan/2022 · Dec/2024

- Maintained architecture, configuration, deployment, and operational documentation while collaborating with development and operations teams.
- Investigated infrastructure and deployment incidents, coordinated escalations, and supported root-cause analysis and service restoration.
- Supported infrastructure operations including Linux systems, networking, IAM/RBAC, security groups, firewall rules, TLS/SSL, storage, and access management.
- Used Grafana and monitoring/logging tools to review infrastructure and application metrics, logs, and service health.
- Used Terraform and AWS CloudFormation to provision and maintain infrastructure as code and repeatable environment configurations.
- Built and maintained CI/CD pipelines using Jenkins, GitLab CI, and AWS CodeBuild for automated build and deployment workflows.
- Configured Kubernetes delivery workflows using Argo CD, Helm, Bitbucket repositories, and Git-based practices to support consistent releases.
- Supported Docker and Kubernetes environments, including cluster and workload operations, deployment troubleshooting, and configuration management.
- Worked with AWS services including EC2, S3, VPC, IAM, EKS, ECR, Lambda, and RDS-related environments.
- Configured and supported cloud infrastructure architecture across AWS and Azure, including compute, storage, networking, access controls, and application hosting.
- Supported migration activities from on-premises infrastructure to cloud environments, including readiness, configuration, deployment support, and post-migration troubleshooting.
- Worked as a DevOps / Infrastructure Engineer supporting cloud transformation and infrastructure operations for e-commerce, banking, and content delivery environments, including migration initiatives from physical servers to cloud platforms.

IT Support Engineer | HRC Colombo, Sri Lanka - Jan/2021– Jan/2022

- Contributed to knowledge-base articles, SOPs, handovers, service reports, and operational documentation; supported on-call activities where assigned.
- Communicated with customers about incidents, service impact, progress, and resolution; maintained clear ticket notes and support documentation.
- Diagnosed software installation, configuration, performance, and compatibility issues; gathered diagnostics and escalated complex cases to L2/L3 teams.
- Supported AVD host pools, session host images, autoscaling, and load-balancing configurations.
- Supported Azure Cloud, Active Directory, Azure Virtual Desktop, user accounts, authentication, access permissions, RBAC, and Conditional Access requests.
- Installed, configured, and troubleshot workstations, operating systems, business applications, peripherals, and endpoint/network connectivity.
- Troubleshot LAN/WAN and wireless connectivity, including Wi-Fi, WLAN, DHCP, DNS, IP configuration, and network access issues.
- Managed incidents and service requests through ServiceNow, including logging, prioritization, tracking, resolution, and escalation in line with SLAs.
- Provided IT support across Windows, macOS, and Linux, troubleshooting hardware, operating systems, applications, account access, and connectivity issues.

EDUCATION

B.Sc. (Hons) in Information Technology – Computer Systems & Network Engineering | SLIIT | 2018–2022
GCE A/L – Technology Stream | National School, Akkaraipattu | 2013–2016

CERTIFICATIONS

AWS Certified Solutions Architect – Associate
Microsoft Certified: Azure Administrator Associate (AZ-104)
AWS Certified Cloud Practitioner
Google Cloud Certified Associate Cloud Engineer
Cisco Introduction to Cybersecurity

PROFESSIONAL DEVELOPMENT

Currently pursuing:

- Certified Kubernetes Administrator (CKA)
- HashiCorp Certified: Terraform Associate
- Red Hat Certified System Administrator (RHCSA)
